

Water Management

In 2024, the Company’s total water consumption was 55,229 cubic meters (m³), representing a 15% decrease compared with the previous year. The Company actively promoted water conservation and strengthened employee awareness of the value of efficient water use through internal communications, along with appropriate monitoring and control of water consumption.

Key initiatives included:

- Implementing an ongoing maintenance plan for plumbing and water-supply related equipment, helping to reduce the risk of equipment failure and improve overall water-use efficiency within the Company.
- Replacing conventional hand-wash faucets with automatic faucets to reduce unnecessary water usage.

Water management target

reduce water consumption by 10% compared with the previous year.

Total Water Volume	
2024	55,229
2023	64,716

15% decrease from previous year.
